ESPRESSO COFFEE MACHINES SINCE 1901

DUO

Thermal Balance without compromise

The new **DUO model** is a sophisticated compact espresso coffee machine that concentrate in a compact body the features of a full size heavy duty professional espresso coffee machine.

The new **software and electronics**, through a 3,5" touch display, allows to control 3 PID thermostats that guarantee an exceptional Thermal Balance to get the best from your coffee beans.

The group is heated by heating element activated by a PID thermostat that keeps a constant temperature.

The 2nd PID thermostat allows to regulate the water temperature into a small boiler dedicated to the coffee extraction, which guarantees an optimal thermal balance in a range from 88-96C°.

The Steam/Water circuit is connected to an independent boiler driven by a 3rd PID thermostat that allows to maximise the steaming power also in case of heavy duty usage.

The **DUO** is equipped with a volumetric coffee dosage controlled by a microprocessor with 4 programmed doses directly from the keypad; the 5th button is activated to allow manual continuous coffee brewing.
